## Introduction

Manufactured goods are act in production line, which pertain to the changing of raw goods to finish product for final consumption in man. This idea could be embedded in manufacturing It is a well-known fact that effective goods production will give perfect and tranquil condition that will lead to growth in national economy, leading to national development. The work is based on secondary data approach of journals, articles and internet search, for data collection. This idea opens the work page, narrowing out the result as analysed. It could be seeing from the result that in 2023, a total of ^599,509 M was generated via manufactured/production goods. This gives a change of 9%, 900% and 860% for the 2023 fiscal year, which interprets an indication of the system economic health via production/manufacturing, thus, affecting the nation in terms of national development.

## Materials and methods

This deals with the procedures employed in carrying out this research work. The steps used for data collection, and the reliability of the results of the data collected. A thematic (recurring idea) approach of journals, articles and internet search were used for data collection in order to achieve the aim of this work.

The area of the study is basically the Nigeria Breweries (NB) Plc, data shall be collected from this source for analysis in tandem to the research work. Therefore, the secondary source of data to be used shall be related to, majorly, the NB Plc.

## Results and discussion

Table 1: 2022 and 2023 Financial Statement of NB

Source: 2023 Nigerian Breweries Plc Annual Report and Accounts

Source: 2024 Nigerian Breweries Plc Annual Report and Accounts

	Group 2024 ₦'000	Company 2024 ₦'000	Group 2023 ₦'000	Company 2023 ₦'000
Revenue				
Nigeria	1,083,354,822	1,073,800,350	599,307,563	599,173,293
Export	1,081,176	1,081,176	335,468	335,468
Revenue	<b>1,084,435,998</b>	<b>1,074,881,526</b>	<b>599,643,031</b>	<b>599,508,761</b>

## Discussion

As seeing in Table 1 and 2, the 2023 results were impacted by the significant shifts in the business landscape with substantial impact on businesses and livelihoods nationwide. Table 3 also shows the impact of the revenue generated for the 2024 fiscal year.

In 2023, change of 9%, 900% and 860% for the 2023 fiscal year was realized, which interprets an indication of the system economic health via production/manufacturing, thus, affecting the nation in terms of national development.

On the final note, Table 3 shows increase estimated at 81% for year 2024, showing development of the firm, NB Plc and by interpretation, a national development via manufacturing.

## Conclusion

Manufactured goods via Manufacturing industries enhance development in any economy, this being the order of the day worldwide. Therefore, manufacturing firms should be given the right platform to operate in order to aid the economy for national development. This was verities above, where through NB Plc and by interpretation, a national development via manufactured goods, production line, and hence, a wrapped-up term in manufacturing, which cumulated to increase in Gross. Domestic Product (GDP) of the nation by the increase in goods manufactured or produced and as a result, a generated employment, security and more within the national environment
